

SYSTEM AND METHOD FOR PRIORITIZING COMMUNICATIONS MESSAGES

Abstract of Disclosure

A method of sorting a received information message in which a source of delivery of the message is indicated by a unique identifier accompanying the message, for example, in an e-mail or voice message system. The method includes steps of receiving the message, looking-up the identifier in a database, assigning a code for the message per the result of the step of looking-up, and prioritizing or forwarding the message according to the code.
